*Antenna Information:*

| Manufacturer | Antenna Type     | Model No.  | Antenna Gain<br>(dBi) |
|--------------|------------------|------------|-----------------------|
| Hytera       | Monopole Antenna | TQC-150CII | 5dBi                  |

*Note: The series product, models MD780i U(2), MD785i U(2), MD786i U(2), MD788i U(2) and MD782i U(2) are electrically identical, The difference between them please refer to the declaration letter for details. For marketing purpose, we selected MD782i U(2) for fully test.*

**Declarations**

BACL is not responsible for the authenticity of any test data provided by the applicant. Data included from the applicant that may affect test results are marked with a triangle symbol “△”. Customer model name, addresses, names, trademarks etc. are not considered data.

Unless otherwise stated the results shown in this test report refer only to the sample(s) tested.

This report cannot be reproduced except in full, without prior written approval of the Company.

This report is valid only with a valid digital signature. The digital signature may be available only under the Adobe software above version 7.0.

This report must not be used by the customer to claim product certification, approval, or endorsement by A2LA, or any agency of the U.S. Government.

This report may contain data that are not covered by the accreditation scope and shall be marked with an asterisk “★”.

## Applicable Standard

According to 1.1307 (b)(1), 2.1091 systems operating under the provisions of this section shall be operated in a manner that ensures the public is not exposed to RF energy level in excess of the communication guidelines.

Limits for Maximum Permissible Exposure (MPE)

| Limits for Occupational/Controlled Exposure |                                   |                                   |   |  |
|---|-----------------------------------|-----------------------------------|---|--|
| Frequency Range (MHz)                       | Electric Field Strength (E) (V/m) | Magnetic Field Strength (H) (A/m) | Power Density (S) (mW/cm <sup>2</sup> ) | Averaging Time  E ,  H  or S (minutes) |
| 0.3- 3.0                                    | 614                               | 1.63                              | (100)*                                  | 6                                      |

| 1500-100,000                                | /                                 | /                                 | 5                                       | 6                                      |

f = frequency in MHz;

\* = Plane-wave equivalent power density;

## Test Procedure

1. Place the EUT's antenna was vertical polarization on the table.
2. The EUT was set to transmit at the frequency at maximum RF power.
3. The Distance between the test probe and the investigated EUT's antenna equal to the distance be specified as safety distance in the user manual.
4. Power density measurements were taken at different heights of the probe from the ground (0.8 to 2.8 meters) while rotating versus azimuth (from 0° to 360°) the antenna.
5. adjusted the distance between the test probe and the tested antenna to the real safe distance,  $R_{real}$ , such that the measured highest power density in the "worst case" position was the same or slightly less than the test limit.
6. The measurement results of final measurements conducted at the chosen azimuth and different heights of the probe above the ground.

**Block Diagram of Test Setup****Test Equipment List and Details**

| Manufacturer | Description | Model No. | Serial No. | Calibration Date | Calibration Due Date |
|--------------|-------------|-----------|------------|------------------|----------------------|
| ETS-LINDGREN | Field Probe | HI-6005   | 00069461   | 2019-02-29       | 2020-02-28           |

\* **Statement of Traceability:** Bay Area Compliance Laboratories Corp. (Dongguan) attests that all calibrations have been performed, traceable to National Primary Standards and International System of Units (SI).

**Test Data****Environmental Conditions**

|                           |         |
|---------------------------|---------|
| <b>Temperature:</b>       | 27.2 °C |
| <b>Relative Humidity:</b> | 53 %    |
| <b>ATM Pressure:</b>      | 100kPa  |

*The testing was performed by Blake Yang on 2019-11-17*

Test Mode:UHF-FM:454.0125 MHz(Worst mode)
